DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,127,672 to Danisch. Danisch discloses a position, orientation, shape, and motion measuring tool. The tool is formed from a flexible substrate with fiber-optic bend and twist sensors disposed along its length. The bend sensors may be optical fiber loop sensors connected to a multi-fiber light source and signal processing unit (columns 3-5). The locations of the distal tip and each sensor may be calculated in three dimensions (column 9, lines 29-38) using sensor data processing means (claim 1). Angular orientation data is approximated as a circular arc about a center (figure 6). Though Danisch does not explicitly state which sensor comprises the distal sensor, it would have been obvious to one skilled in the art to interpret as the distal end the first measurement which would have been unaffected by the measurement of intermediate sensors on the basis of reasonable interpretation.

Response to Arguments

Art Unit: 3737

Applicant's arguments filed on 18 September 2002 have been fully considered but they are not persuasive. Arguments regarding the accuracy of measurements of intermediate sensors are misleading, in that intermediate sensors may be inaccurate because they rely on the accuracy of a previous sensor. However, the distal sensor, which lacking any further distinction in the claims, can be interpreted as the first sensor, and thus would not rely on any of the previous measurements. Therefore the distal tip, being the first measurement, is unaltered by the measurements of the intermediate sensors.

Allowable Subject Matter

Claims 15-22 and 25-27 are allowed.

Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable, if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within

Art Unit: 3737

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
